Profile

I've built up 13 years of professional experience in the design industry. I previously led the design team at Erskine Design, voted one of the UK's most respected digital agencies by readers of Net Magazine. My passions lie in designing accessible digital applications that address real user needs.

Clients I've worked with include the Department for Work & Pensions, the BBC, Zurich, Frieze, Edelman and Endsleigh. I've led the design on large-scale digital projects with budgets of £500k+.

I work best when incorporating user research into the design process as part of an agile team. Although I don't consider myself to be a specialist developer, I was previously responsible for the front-end development of the ITV e-commerce site (2008). I believe that an in-depth understanding of technical constraints and an analytical approach is essential when tackling real design problems.

Skills

- User-centred design
- Interface design across multiple devices and platforms
- Establishing design patterns and style guides
- Information architecture
- Prototyping in code
- Accessibility best practices
- Design research (including testing with users of assistive technologies)
- User journey mapping
- Design software (including Illustrator, Photoshop, Sketch, InVision, OmniGraffle)
- Front-end development (including HTML, CSS, SASS, Git)
- Agile team working
